

PCTF Privacy Component Overview

Document Status: Candidate for Final Recommendation V1.1

In accordance with the [DIACC Operating Procedures](#), a Final Recommendation is a deliverable that represents the findings of a DIACC Expert Committee that have been approved by an Expert Committee and have been ratified by a DIACC Sustaining Member Ballot.

This document was developed by DIACC's [Trust Framework Expert Committee](#) Privacy Design Team with input from the public gathered and processed through an open peer review process. It is anticipated that the contents of this document will be reviewed and updated on a regular basis to address feedback related to operational implementation, advancements in technology, and changing legislation, regulations, and policy. Notification regarding changes to this document will be shared through electronic communications including email and social media. Notification will also be recorded on the [Pan-Canadian Trust Framework Work Programme](#). Changes to this document that may affect certification and Trustmark status will be defined in the Pan-Canadian Trust Framework Assessment component.

This document is provided "AS IS," and no DIACC Participant makes any warranty of any kind, expressed or implied, including any implied warranties of merchantability, non-infringement of third-party intellectual property rights, and fitness for a particular purpose. Those who are seeking further information regarding DIACC governance are invited to review the [DIACC Controlling Policies](#).

53

54

55 1. Introduction to the PCTF Privacy 56 Component

57 This document provides an overview of the PCTF Privacy Component, a component of
58 the Pan-Canadian Trust Framework (PCTF). For a general introduction to the PCTF,
59 including contextual information and the PCTF goals and objectives, please see the
60 PCTF Model Overview.

61 Each PCTF component is made up of two documents:

- 62 1. **Overview** – Introduces the subject matter of the component. The overview
63 provides information essential to understanding the Conformance Criteria of the
64 component. This includes definitions of key terms, concepts, and the processes
65 or principles that are part of the component.
- 66 2. **Conformance profile** – Specifies the Conformance Criteria used to standardize
67 and assess the integrity of the privacy processes, policies and controls of
68 organizations in a Digital Identity Ecosystem.

69 This overview provides information related to and necessary for consistent interpretation
70 of the PCTF Privacy Conformance Profile.

71 1.1 Purpose and Anticipated benefits

72 Privacy is a fundamental requirement of digital identity interactions. As such, all
73 participants in the Pan-Canadian Trust Framework (PCTF) have a responsibility to
74 follow privacy-respecting practices. Privacy-respecting practices rely on the principle
75 that individuals know and understand the details and potential benefits, risk of harm and
76 consequences associated with managing their personal information and can take action
77 based on that information.

78
79 The Privacy Component of the PCTF is concerned with the handling of personal data
80 for digital identity purposes. The objective of the Privacy Component is to ensure the
81 ongoing integrity of the privacy processes, policies and controls of organizations in a
82 Digital Identity Ecosystem by means of standardized conformance criteria used for
83 assessment and certification against the Pan-Canadian Trust Framework (PCTF). The
84 Conformance Criteria for the Privacy Component specify tests that can be used to
85 assess that an organization performing the role of Disclosing Organizations, Requesting
86 Organizations, Notice and Consent Processors, Network Providers, or the Governing
87 Body. The Conformance Criteria are designed to demonstrate that participants are
88 handling digital identity information in alignment with the ten Principles defined in
89 Schedule 1 of the Canada's Personal Information Protection and Electronic Documents

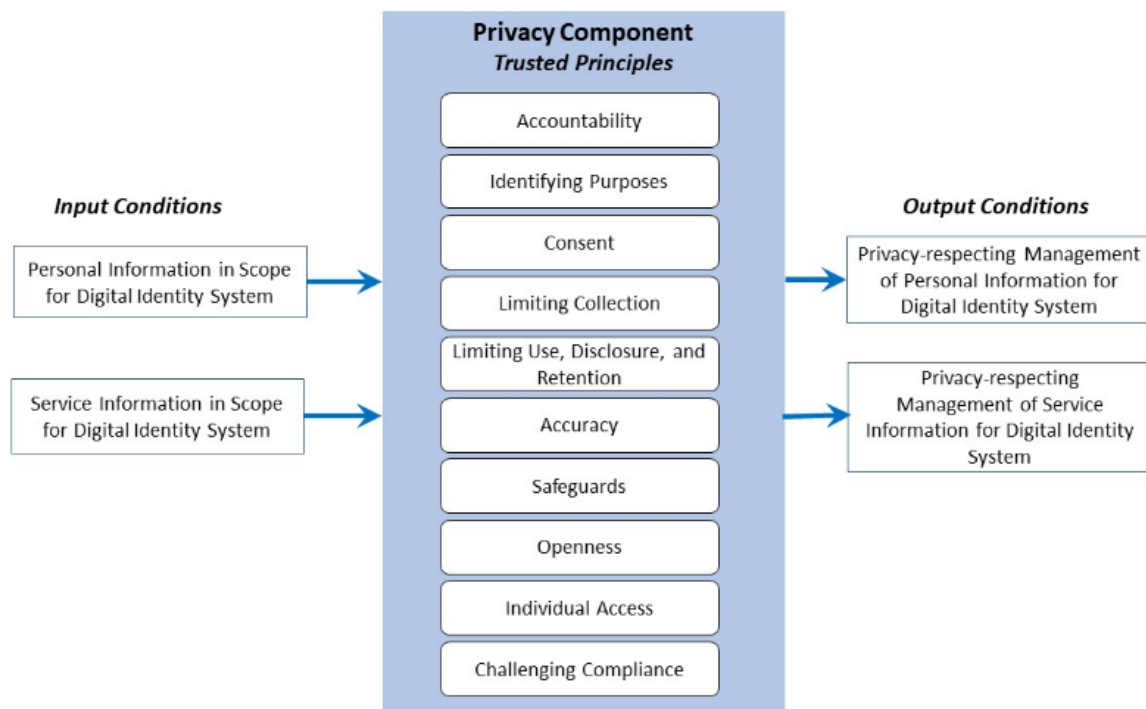

90 Act (PIPEDA) legislation. PIPEDA applies to organizations handling personal
91 information in the course of commercial activities.

92 **Note**

93 These conformance criteria do not replace existing regulations; organizations are
94 expected to comply with relevant privacy legislation, policy and regulations in their
95 jurisdiction.

96 Future versions of this component may incorporate conformance criteria relevant to
97 other privacy guidance (e.g., Privacy by Design, PIPEDA modernization) and regulatory
98 frameworks (e.g., federal and provincial privacy acts).

99 Figure 1 provides a conceptual overview and logical organization of the Privacy
100 Component.

101

102 **Figure 1. Privacy Component**

103 The Privacy Component consists of elements that indicate the following:

- 104
- 105 • **Trusted Principles** – the set of principles that organizations (e.g., Disclosing
106 Organizations, Requesting Organizations, Notice and Consent Processors,
107 Network Facilitators) are expected to adhere to when handling subject-specific
and service-specific personal information in a digital identity system. Each trusted

Status: DIACC Candidate for Final Recommendation

This Recommendation has been prepared for community input and is approved by the DIACC Trust Framework Expert Committee. 4

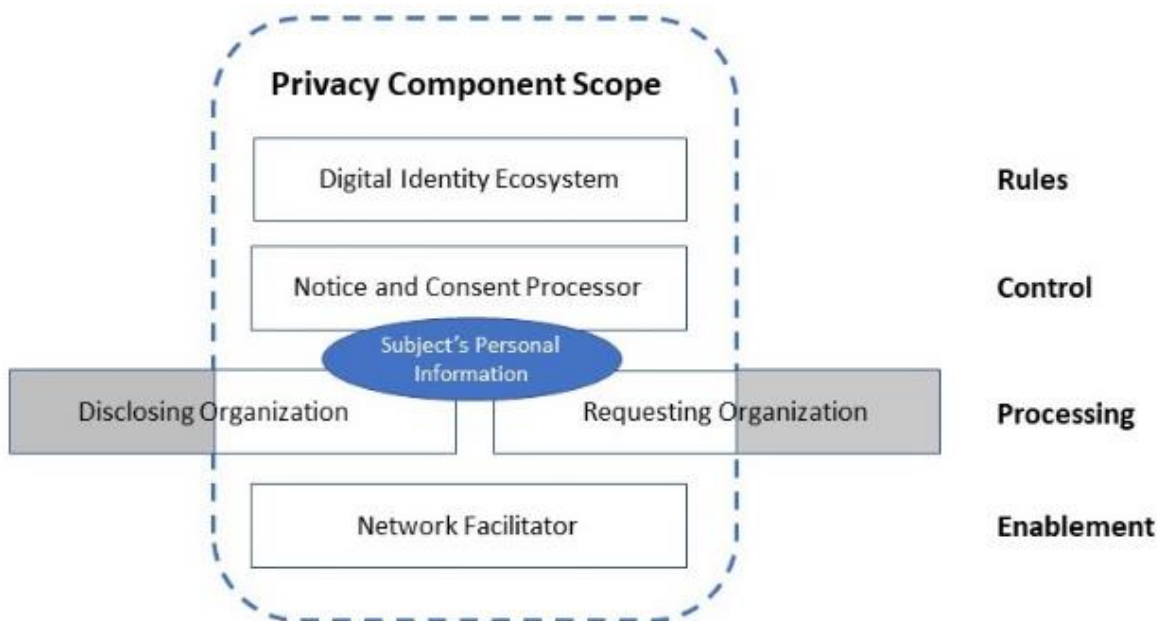

For more information, please contact review@diacc.ca

- 108 principle is assessed using a set of conformance criteria associated with that
109 principle.
- 110 • **Inputs** – input into trusted principles, for example, personal information requiring
111 privacy management to proceed.
 - 112 • **Outputs** – output resulting from trusted principles being applied, for
113 example, privacy policies and controls applied to personal information.

114 1.2 Scope

115 Figure 2 illustrates the scope of the privacy component, which includes the functions
116 performed by the Disclosing Organization, Requesting Organization, Notice and
117 Consent Processor, as well as the Network Facilitator and Governing Body roles as
118 described in the Roles section.

119 In the PCTF context, Personal Information (as defined in the Terms and Definitions
120 section) will normally only be accessed by those performing roles that process digital
121 identity information within the Digital Identity Ecosystem, and who will restrict access for
122 those purposes. Participants that perform roles in the Digital Identity Ecosystem to
123 enable, control and implement rules to facilitate the sharing of personal
124 information, ideally (e.g., unless required by law) should not be able to see, read,
125 change, or be exposed to the information. The Notice and Consent Processor, which
126 performs control functions, could be exposed to some personal information in
127 (depending on how the Notice and Consent Processor is manifested), but this should be
128 minimized (as per conformance criteria for limiting collection LIMC-9).

129
130 **Figure 2. Privacy Component Scope and Roles**

131 **1.2.1 In-Scope**

- 132 • Within the context of the PCTF, privacy requirements applicable to the roles
133 within the Digital Identity Ecosystem. For an overview description of the PCTF
134 model and its components, please refer to the PCTF Model Overview
- 135 • Requirements for the handling of Subject-Specific Personal Information and
136 Service-Specific information associated with digital identity
- 137 • Privacy related policy and processes as they apply to delivery of assured digital
138 identity

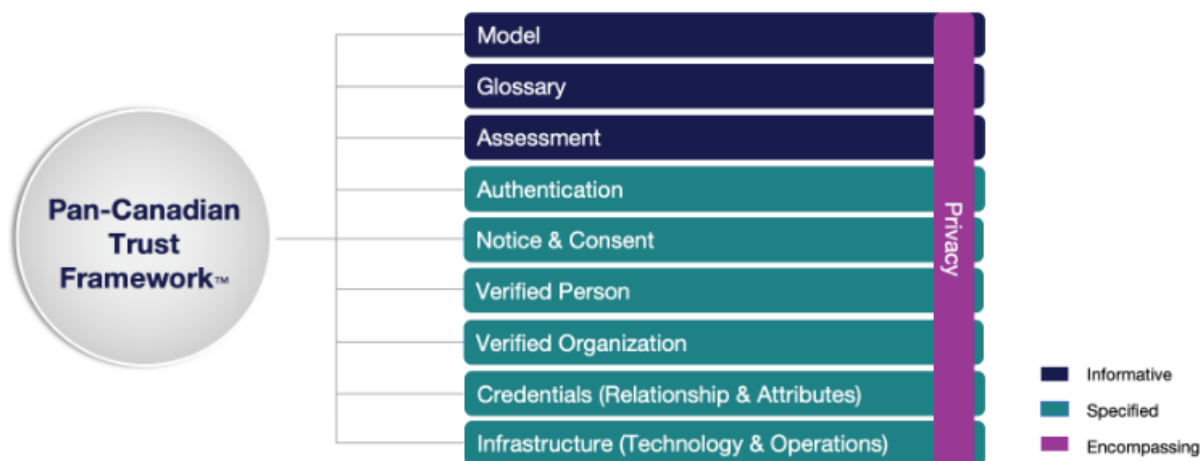

139 **1.2.2 Out-of-Scope**

- 140 • Fraud monitoring: The Privacy component does include conformance criteria that
141 address breaches of privacy and fraud reporting for the roles specific to the
142 Privacy component. Requirements for more general fraud monitoring, reporting,
143 and actions to be taken within the Digital Identity Ecosystem warrant further
144 consideration and development within the PCTF context. For reference, please
145 consult the following criteria:
 - 146 ○ Baseline - BASE 6
 - 147 ○ For Governing Body - ACCO 2
 - 148 ○ For Notice and Consent Processor - CONS-21
- 149 • Specific related requirements addressed in other PCTF profiles (e.g., Delegated
150 authority, Privacy and Security section of the Verified Organization Conformance
151 Profile, requirement SOUR-01 in the Verified Person Conformance Profile)
- 152 • Baseline conformance criteria (See BASE in the Privacy Conformance Profile) do
153 not address use cases where the Subject acts as the Disclosing Organization.
- 154 • Criteria variance dependent on LoA levels: The DIACC is currently working on
155 the specifics of the LoA framework to be applied. While the work is mature
156 enough to be reflected in some of the Profiles, it was felt that further detail was
157 required in order to define any variances in criteria for the Privacy Component.

158 **1.3 Relationship to the Pan-Canadian Trust** 159 **Framework**

160 The Pan-Canadian Trust Framework (PCTF) consists of a set of modular or functional
161 components that can be independently assessed and certified for consideration as
162 trusted components. Building on a Pan-Canadian approach, the PCTF enables the
163 public and private sector to work collaboratively to safeguard digital identities by
164 standardizing processes and practices across the Canadian Digital Identity Ecosystem.

165 Figure 3 is an illustration of the components of the Pan-Canadian Trust Framework. The
166 Privacy Component encompasses all sub-components (i.e., Privacy related concerns
167 are applicable to elements of all PCTF Profiles).

168
169 **Figure 3. Components of the draft Pan-Canadian Trust Framework**

170 PCTF conformance criteria do not replace or supersede existing regulations;
171 organizations and individuals are expected to comply with relevant legislation, policy
172 and regulations in their jurisdiction.

173 2. Privacy Component Conventions

174 This section describes and defines key terms and concepts used in the PCTF Privacy
175 Component. This information is provided to ensure consistent use and interpretation of
176 terms appearing in this overview and the PCTF Privacy Conformance Profile.

177 2.1 Terms and Definitions

178 The Privacy component references the terms and definitions listed in the PCTF
179 Glossary and specifically uses the following terms and definitions:

180 **Subject**

181 A Person, Organization, or Machine that holds or is in the process of obtaining a digital
182 representation in the digital identity ecosystem system regulated by the PCTF, and that
183 can be subject to legislation, policy and regulations within a context. (Note: Delegated
184 Authority is not addressed in this document).

185 **User**

186 A Person who is either the Subject or authorized to represent the Subject and
187 intentionally accessing a digital service or digital program.

188 **Notice**

189 A statement that is formulated to describe the collection, use and disclosure of Personal
190 Information and is presented to a User. May also be referred to as: consent form or
191 notice statement.

192 **Consent**

193 Permission, given from a User authorized to do so, to share Identity and/or Personal
194 Information about a Subject as per the terms defined in a Notice. In the context of the
195 PCTF, consent is equated to "Meaningful Consent" as described by the Office of the
196 Privacy Commissioner of Canada and PIPEDA. May also be referred to as: consent
197 decision.

198 Unless explicitly stated, consent in the Privacy component refers to express, or explicit,
199 consent for sharing Personal Information, where the Subject must perform an action to
200 provide consent. Implied consent, if applicable, will be identified as such in the criteria.

201 **Personal Information**

202 In general, Personal Information is defined as "Under PIPEDA, personal information
203 includes any factual or subjective information, recorded or not, about an identifiable
204 individual." For the purpose of this document, we define two types of Personal
205 Information:

- 206 • **Service-Specific Information** – information collected or generated by the
207 participants (Disclosing Organization, Requesting Organization, Notice and
208 Consent Processor(s), or Network Facilitator) for purposes of operating and
209 maintaining the service (e.g., service specific pseudonymous identifiers,
210 transaction records, proofs of transactions including consent). In some cases,
211 service-specific information may be shared, with subject's consent.
- 212 • **Subject-Specific Personal Information** – information a Subject consents to
213 share from a Disclosing Organization to a Requesting Organization (e.g., name,
214 email address, phone number, mailing address, date of birth, account
215 information).

216 **Digital Identity Ecosystem**

217 An interconnected system for the exchange and verification of digital identity
218 information, involving public and private sector organizations (e.g., government,
219 commercial, non-profit, and other entities) who participate in, and comply with a
220 common Trust Framework for the management and use of digital identities, and the
221 Subjects of those digital identities. In the context of the Privacy component, the Digital
222 Identity Ecosystem refers to a Canadian Digital Identity Ecosystem compliant with the
223 PCTF. Participants in a Digital Identity Ecosystem may include Requesting

Status: DIACC Candidate for Final Recommendation

This Recommendation has been prepared for community input and is approved by the DIACC Trust Framework Expert Committee. 8

For more information, please contact review@diacc.ca

224 Organization, Disclosing Organization, Notice and Consent Processor, Network
225 Facilitator, and Governing Body as identified in the Scope section of this document.

226 3. Roles

227 The following roles in the Digital Identity Ecosystem are defined to cover the scope of
228 the Privacy Component. Depending on the use case, separate organizations may take
229 on one or more roles.

- 230 • **Disclosing Organization** – A Role that an Organization or Person performs to
231 hold Subject-Specific Personal Information, that the User consents to disclose to
232 a Requesting Organization or that the Disclosing Organization can lawfully
233 disclose under relevant legislation. In a digital identity context, this will often be
234 an identity or attribute provider.
- 235 • **Governing Body** – A Role that a Participant performs to make sure that the
236 standards, processes, and the associated requirements of the Digital Identity
237 Ecosystem are implemented, which include conformance with government
238 legislation, regulations and policy. They also enforce compliance by Digital
239 Identity Ecosystem participants to agreed safeguards, guidance, best practices,
240 rules and commercial arrangements.
- 241 • **Notice and Consent Processor** – A Role that a Participant performs to provide
242 the notice to the User of the request for Personal Information (from the
243 Requesting Organization), to obtain and record the consent and provides the
244 User with the means to manage the consent going forward, including the
245 withdrawal of consent.
- 246 • **Network Facilitator** – A Role that a Participant performs to connect parties
247 together in a multi-party identity transaction. This organization is an active
248 participant and adds value in the delivery of the digital identity service (e.g., not
249 an internet service provider that passively provides internet connectivity). For
250 example, a blockchain provider, or Software as a Service provider (SaaS) that
251 facilitates the network.
- 252 • **Requesting Organization** – A Role that an Organization or Person performs to
253 receive Personal Information that the User consents to disclose. In a digital
254 identity context, this will often be a service provider or relying party.

255 These roles help to isolate the different functions and responsibilities with respect to
256 privacy across the end-to-end processes for managing digital identities. They are not
257 intended to imply any particular solution, architecture or implementation.

258 For example, in some cases, the notice may be presented and consent collected from
259 an organization facilitating Personal Information exchange between the User, Disclosing
260 Organization and Requesting Organization. In other cases, the notice may be presented
261 and consent collected directly by either the Disclosing or Requesting Organization, in
262 which case that organization would also be the Notice and Consent Processor.

263 **4. Privacy Component Key Concepts**

264 **4.1 Personal Information**

265 Privacy-respecting practices rely on the principle that individuals know and understand
266 the details and potential benefits and consequences associated with managing their
267 personal information and can take action based on that information.

268 Personal information, as defined for the purposes of this Profile, includes Subject-
269 Specific Personal Information and Service-Specific Information. This encompasses
270 information that the user consents to disclose (e.g., name, email address, phone
271 number, mailing address, date of birth, account information, etc.) as well as information
272 required to operate and maintain the service (e.g., service specific pseudonymous
273 identifiers, transaction records).

274 **4.2 Changes of Personal Information at Source (a 275 Disclosing Organization)**

276 In the event of a change (including corrections) to Subject-Specific Personal
277 Information, the Disclosing Organization is under no obligation within the Digital Identity
278 Ecosystem to proactively notify any Requesting Organization that has previously
279 received the Subject-Specific Personal Information, nor to flag that a change has been
280 made, unless required by law. The onus is on a Requesting Organization to compare
281 newly received data against previously received data for changes, and act on changes
282 as relevant to their business processes.

283 **4.3 Upstream and Downstream Handling of Personal 284 Information**

285 The handling of Subject-Specific Personal Information, and Service-Specific
286 Information, by a Disclosing Organization is subject to relevant privacy legislation and
287 regulations and is not generally deemed to fall within the scope of the requirements of
288 the PCTF until that data is processed for the purpose of sharing via the Digital Identity
289 Ecosystem. An exception to this is when a Requesting Organization has specific
290 requirements on the handling of personal information by its source (the Disclosing
291 Organization). These requirements will thus form part of the Digital Identity Ecosystem
292 governance and constitute "upstream" requirements with which any Disclosing
293 Organization servicing that Requesting Organization must comply. Similarly, the
294 handling of a Subject-Specific Personal Information by a Requesting Organization is
295 subject to relevant privacy legislation and regulations and is not generally deemed to fall
296 within the scope of the requirements of the PCTF once that data has been shared via

297 the Digital Identity Ecosystem. An exception to this is when a Disclosing Organization
298 has specific requirements on the handling of personal information by its destination (the
299 Requesting Organization). These requirements will thus form part of the Digital Identity
300 Ecosystem governance and constitute "downstream" requirements with which any
301 Requesting Organization receiving data from that Disclosing Organization must comply.

302 **4.4 Privacy by Design**

303 Privacy by design is one of DIACC's guiding principles for a Canadian Digital Identity
304 Ecosystem, specifically "To, Implement, protect, and enhance privacy by design".
305 Privacy considerations are integral to and should be taken into account at all stages of
306 the development of a digital identity solution. Privacy-enhancing tools enable an
307 individual to manage their information and what specified purpose(s) it is used for.

308 While the House of Commons Standing Committee on Access to Information, Privacy
309 and Ethics (ETHI), has recommended that PIPEDA be amended to include privacy by
310 design principles ^[1], the current PIPEDA Fair Principles do not explicitly address privacy
311 by design. As such, the Conformance Criteria of the PCTF Privacy Component do not
312 include criteria to evaluate adherence to privacy by design.

313 **5. Notes and Assumptions**

314 ***More than one organization may be responsible for carrying out the Privacy***
315 ***trusted processes from end-to-end.*** The involvement of several organizations may
316 introduce complexity in the assessment and certification process, but the trust
317 framework does not constrain different implementation approaches. Within the
318 conformance profile three organizational roles are defined (requesting organization,
319 disclosing organization and notice and consent processor). These help to isolate the
320 different functions and responsibilities within the end-to-end process. They are not
321 however intended to imply any particular solution, architecture or implementation.

322 ***Privacy-respecting practices rely on the principle that individuals know and***
323 ***understand the details*** and potential benefits and consequences associated with
324 managing their personal information and can take action based on that information. The
325 specific requirements for this are addressed in the Notice and Consent PCTF Profile.
