

PCTF Trust Registries Component Overview

| 3 | Document Status: Draft Recommendation V1.0 |
|------------------------------|--|
| 4 5 | In accordance with the <u>DIACC Operating Procedures</u> , Draft Recommendations are a deliverable which is used to share early findings and to gather broad feedback. |
| 6 7 8 9 10 11 | This document has been developed by DIACC's <u>Trust Framework Expert Committee</u> . It is anticipated that the contents of this document will be reviewed and updated on a regular basis to address feedback related to operational implementation, advancements in technology, and changing legislation, regulations, and policy. Notification regarding changes to this document will be shared through electronic communications including email and social media. Notification will also be recorded on the <u>Pan-Canadian Trust Framework Work Programme</u> . |
| 13 14 15 16 17 | This document is provided "AS IS," and no DIACC Participant makes any warranty of any kind, expressed or implied, including any implied warranties of merchantability, non-infringement of third party intellectual property rights, and fitness for a particular purpose. Those who are seeking further information regarding DIACC governance are invited to review the DIACC Controlling Policies . |

46

43

44

45

48 1. Introduction

- 49 This document provides an overview of the PCTF Trust Registry Component, a
- 50 component of the Pan-Canadian Trust Framework (PCTF). For a general introduction to
- 51 the PCTF, please see the PCTF Model Overview. The PCTF Model Overview describes
- 52 the PCTF's goals and objectives and provides a high-level overview of the PCTF.
- Each PCTF component is described in two documents:
 - Overview: Introduces the subject matter of the component. The overview
 provides information essential to understanding the Conformance Criteria of the
 component. This includes definitions of key terms, concepts, and the scope of
 the component.
 - 2. **Conformance Profile**: Specifies the Conformance Criteria used to standardize and assess trust elements that are part of this component.
- This overview provides information related to and necessary for consistent interpretation of the PCTF Trust Registry Conformance Profile.

2. Purpose, Context, and Scope

2.1 Purpose

54

55

56

57

58

59

63

74

- 64 The purpose of a Trust Registry is to provide participants of a Digital Identity Ecosystem
- 65 the means to verify that Ecosystem digital participants are trustworthy. Just as a Verifier
- 66 needs to know they are dealing with the right person, as outlined in the Verified Person
- 67 component and that their Credential is valid, the Verifier and the Holder need to know
- that the organization that is issuing the credential is valid. If an Issuer is listed in a trust
- registry, this indicates to interested parties (e.g., Verifiers and Holders) that an Issuer
- 70 can be trusted as an authoritative provider of credentials. Digital Identity Ecosystems
- and their associated Trust Registries use a Trust Framework (such as the PCTF) to
- define how Issuers. Verifiers. Holders, and Digital Wallets should or must operate to be
- 73 considered trustworthy.

2.2 Context

- 75 A Trust Registry is a key component of the new and emerging decentralized digital
- 76 identity architecture. In this decentralized (or Self Sovereign) architecture a Digital
- 77 Wallet receives Verifiable Credentials from Issuers and then subsequently provides
- 78 presentations of these Credentials to Verifiers. In this architecture a Trust Registry
- 79 provides Issuers, Verifiers, Digital Wallets (and their human Holders), and other Trust
- 80 Registries the information necessary to verify the identity and status of the other parties

Status: Draft Recommendation

- as well as the authenticity and status of Credentials and Presentations that a Digital
- 82 Wallet receives and presents.

Note: an Issuer, Verifier, or Wallet Provider may be a member of any number of Digital

84 Identity Ecosystems.

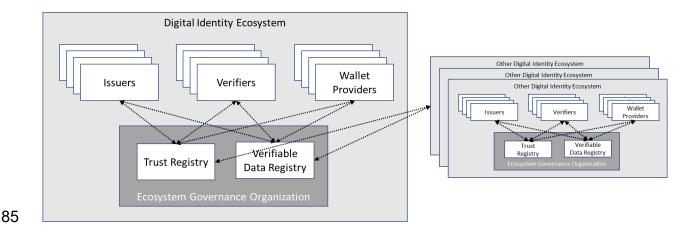

Fig 1: Digital Identity Ecosystems

Trust Registries must in turn rely on the legal and foundational sources of digital identity such as Corporate Registries, Drivers Licenses, and Health Card providers. Other components in the PCTF define how these foundational sources of digital identity should or must be used to register digital services within the Trust Registry.

2.3.1 In-Scope Topics

- Trust Registry Governance
 - Business Structure legal framework, business objectives, fees, contracts, and dispute resolution.
 - Ecosystem Scope (Issuers, Verifiers, Wallet Providers, other Trust Registries) – digital service types and industries supported by the Registry.
 - Governance Processes who operates the governance process and how governance decisions made, communicated, and enforced.
 - Policy and Standards (Trust Framework) the rules for the digital services supported by the registry and for the registry itself.
- Trust Registry Operations
 - Technology and Infrastructure Management how a trustworthy registry's technical infrastructure should be managed (see <u>PCTF Infrastructure</u> (<u>Technology & Infrastructure</u>) component).

Status: Draft Recommendation

- 107 o Technical Services the registry technology interfaces that are provided, 108 the registrant schemas, credential schemas, and credential status 109 information that are provided by the registry.
 - Registration and Certification Management
 - Certification/Verification/Trust Mark Services the process for verifying that the registrant complies with the policies and standards of the Ecosystem.
 - Registration how registrants are identified and authenticated/authorized to use the registry (see PCTF components <u>Verified Person</u> and <u>Verified</u> <u>Organization</u> components).
 - 3rd party Trust Registry certification and registration.
 - The process for suspending or revoking registration.

2.3.2 Out-of-Scope Topics

136

- This component does not address requirements of the foundational identity registries that Trust Registries depend upon for identification of entities, such as Corporate Registries, Drivers Licenses, and Birth Registries.
- Digital Identity Ecosystems may limit their scope of membership to a particular industry segment. This component does not provide any guidance on how an Ecosystem or Ecosystems might choose or limit their scope of membership.
- Digital Identity Ecosystems may have policies regarding whether Verifiers, Issuers, Wallet products, or other Trust Registries will be registered in their trust registry. This component does not provide guidance on whether they should or should not, only that they may be included where required and how they should or must be registered.
- Digital Identity Ecosystems may have policies that allow anonymous read access (or not) to the trust registry. This component does not provide guidance on whether they should or should not, only that anonymous access may be allowed where required.

3. Relationship to the Pan-Canadian Trust Framework

- 137 The PCTF consists of a set of modular or functional components that can be
- independently assessed and certified for consideration as trusted components. Building
- on a Pan-Canadian approach, the PCTF enables the public and private sector to work
- 140 collaboratively to safeguard digital identities by standardizing processes and practices
- 141 across the Canadian digital ecosystem.
- 142 This component references other PCTF components to define the technology,
- operations, and management processes expected of the Trust Registry. As with other
- 144 PCTF components, this component does not specify a particular technology stack.

Status: Draft Recommendation

145 Figure 1 is an illustration of the components of the Pan-Canadian Trust Framework.

4. Conventions

- 149 This section describes and defines key terms and concepts used in the PCTF Trust
- 150 Registries Component. This information is provided to ensure consistent use and
- interpretation of terms appearing in this overview, and in the PCTF Trust Registries
- 152 Conformance Profile.

 A Credential is a set of one or more Claims made about a subject by an Issuer. Also known as Verifiable Credentials.

Digital Identity Ecosystem (also referred to as a Network)

A formal organization of digital identity participants (Entities) that that operate a Trust Registry. As defined in the PCTF Glossary Final Recommendation V1.0, an interconnected system for the exchange and verification of digital Identity Information, involving public and private sector Organizations that comply with a common Trust Framework for the management and use of digital identities, and the Subjects of those digital identities.

Digital Wallet

A Digital Wallet is a software-based Credential Repository system that securely stores information for a Holder. Depending upon the nature of the wallet, it may contain information such as Credentials, Verifiable Credentials, payment information, and/or passwords. The purpose of a Wallet is to securely store Credentials and/or Identity Attributes, and to enable the Holder to assemble and prepare Verifiable Presentations. Some Wallets might have identity proofing capabilities and/or Agents to facilitate the sharing of Credentials they manage.

• Digital Wallet Provider

 An Entity that develops Digital Wallet products for use by Holders. Digital Wallet Providers may be Issuers of credentials to Digital Wallets to prove their authenticity.

Entity

 As defined in the <u>PCTF Glossary Final Recommendation V1.0</u>, something that has a separate and distinct existence and that can be identified in a context.

Holder

An Entity that receives Credentials from Issuers, keeps them in their possession, and provides Presentations of Credentials to Verifiers. Holders use Digital Wallets to receive, keep, and present Credentials. Digital Wallets display information from the Trust Registry about Issuers and Verifiers to the Holder, so that Holders make informed decisions about interacting with Issuers and Verifiers.

Issuer

 A Registrant that provides Credentials to Holders. Issuers may consider information from the Trust Registry about the Holder's Digital Wallet in a decision to provide credentials.

Presentation

204 o A Presentation is data, typically representing one or more Claims about a 205 Subject, that is derived from one or more Credentials, Verifiable 206 Credentials, Endorsed Relationships, or Verifiable Relationships and 207 shared with a Verifier. 208

Registering Party

o An Entity (usually a real person) that is legally authorized to register an Entity with a Trust Registry.

o An Entity that is registered in a Trust Registry. Registrants are Issuers, Verifiers, Digital Wallet Providers, and other Trust Registries.

Trust Registry

A digital service operated by a Digital Identity Network that provides information about Registrants. The information can be human readable and/or machine readable such that people and technology services can make informed decisions about the trustworthiness of a Registrant's services (e.g., assurance level as per a Trust Framework). The Trust Registry may include a Verifiable Data Registry component.

Trust Registry Operations

The business and technology processes used to manage the infrastructure and information content of the Trust Registry as well as certify/register Entities in the Trust Registry. The Trust Registry and its operations conform to a Trust Framework such as the PCTF.

Trust Registry Governance (Governance)

• The management processes that define the mission, policies, procedures, and standards of an Ecosystem and its Trust Registry.

Verifiable Data Registry

A role a system might perform by mediating the creation and verification of identifiers, keys, and other relevant data, such as verifiable credential schemas, revocation registries, issuer public keys, and so on, which might be required to use verifiable credentials (from W3C).

Verifier (also referred to as a Relying Party)

A Registrant or Entity that receives Presentations of Credentials from Holders and verifies Credentials using information about the Issuers (of the Credentials) from the Trust Registry.

5. References

- 239 This section lists all external standards, frameworks, guidelines, registries, and other 240 documents referenced in this PCTF component. This component of the PCTF leverages 241 the skills, experience, and lessons learned of other organizations working to improve 242 this domain and has taken into consideration material from the following sources:
 - Trust Over IP (ToIP) https://github.com/trustoverip/tswg-trust-registrytf/blob/main/docs/ToIP%20Trust%20Registry%20V1%20Specification.md

- Decentralized Identity Foundation (DIF) Credentials Working Group
