

Service Description

ATB Ventures Oliu

- Oliu provides a complete digital identity verification and authentication solution.
- Users confirm their identity using a combination of digital ID, government-issued ID, and bank account information to facilitate layered identity verification.
- Once users are onboarded, Oliu helps organizations issue and manage verifiable credentials to give users autonomy and control over their personal information with a secure and portable identity. This portable identity also enables passwordless authentication via a digital wallet, which eliminates costly password support and time-consuming manual identity proofing and re-verification.
- Oliu is interoperable, customizable, and flexible; catering to industries from insurance to government to telecom to banking.
