

Service Description VerifID

The best fraud prevention consists of leading technology and a human element

VerifID™ is an ID verification platform created by Chicago Title Insurance Company. We can verify an individual's identity by checking against hundreds of compliance and fraud data points, verifying two government-issued photo IDs, performing a biometric facial scan, verifying identity data in the credit file, and reviewing cell phone information (including the age of the account).

Our team of highly trained underwriters review every VerifID request—meaning you're benefiting from decades of underwriting expertise.
