

Service Description

Treefort

Treefort's Identity Verification (IDV) is fast, reliable and already trusted by law offices across Canada. Treefort uses Multi-Factor Authentication (MFA) to analyze security features in government-issued IDs for authentication paired with a sophisticated biometric facial verification with the ability to detect deepfakes. Moreover, a soft check of the clients credit file (which does not impact their credit score) is completed along with a phone number analysis. Treefort provides the option for enhanced fraud detection using our banking verification. All data is presented in a clear, detailed report, ensuring streamlined processes and secure transactions. Treefort is Canada's premier IDV provider, leveraging over 1,750 data points from trusted sources to assess compliance, fraud and money laundering indicators.
