facephi.com

Facephi supports digital trust by verifying that a person is who they claim to be — and that they exist at all. The company detects synthetic and manipulated identities, and keeps verifying across the **full customer lifecycle**: onboarding, authentication, transaction and ongoing monitoring.

Document validation, biometric verification with liveness detection, behavioural signals, fraud detection and compliance screening run on a single platform, closing the gaps that disconnected tools leave between one stage and the next.

Identity is treated as a continuous state rather than a one-time check, with auditable evidence at every step. Banks, insurers, gaming or public sector in more than 30 countries rely on Facephi.
